

Internal parasites can wreak havoc on your herd. The good news is that you have several deworming options to suit your operation's needs. SAFE-GUARD® (fenbendazole) offers plenty of formulations that can be used chute side including drenches and paste, or on the pasture including blocks, pellets, free-choice mineral and range cubes. Safe and proven, SAFE-GUARD goes straight to the gut, killing worms where they live, ultimately reducing pasture contamination. <http://www.safe-guardcattle.com/>
