

Backyard Chicken Flock Health

MINUTE

The 3 Pillars of Chicken Flock Health

The most complete and effective Flock Health Plan for enthusiasts includes three key steps.

Deworm

- Deworming is an important practice for removing intestinal parasites in poultry.
- Intestinal parasites are often found in the digestive system of poultry.
- Chickens are susceptible to intestinal parasites due to their behavior of scratching in yards or pasture areas.
- Chickens become infected with intestinal worms by ingesting worm eggs from their environment.
- SAFE-GUARD® AquaSol (fenbendazole oral suspension) treats the most common types of worms in backyard chickens *Ascaridia galli* (roundworms) and *Heterakis gallinarum* (cecal worms) with no withdrawal periods.
- SAFE-GUARD® AquaSol is the only FDA approved formulation for deworming backyard chickens.

Vaccinate

- Early vaccination stimulates uniform immunity, to protect chickens from diseases.
- Chicken owners should research a vaccine program or consult with a veterinarian to help develop a long-term vaccination program, addressing all the potential risks to their flock.
- Use LT-IVAX® for viral protection against fowl laryngotracheitis.
- Use COCCIVAC®-D2 to help protect against the major coccidiosis strains impacting chickens.
- Use PP-VAC™ for protection against avian pox virus.

Control

- External parasites such as lice, flies, gnats, mosquitoes and others can act as an intermediate host for worms, and transmit diseases such as *Salmonella*, *Campylobacter* and botulism.
- Flies and other parasites cause stress in chicken coops, resulting in health issues and decline in egg production.
- Lice are biting parasites that live on the chicken, feeding on skin and feathers. They mainly occur on the skin around the vent and on the breast and thighs.
- External parasites can cause significant loss of condition and in some cases death from anemia.
- Use SYNERGIZED DELICE® in any type of sprayer, undiluted, and apply directly to the areas and premises where insects are in sight.
- One 5L bottle treats up to 9,636 square feet and is safe to be used directly on or in the chicken coops & runs.

Backyard Chicken Flock Health

Deworm

SAFE-GUARD® AquaSol (fenbendazole oral suspension)

UIN: 215621 UPC: 662858216103

SAFE-GUARD® AquaSol is indicated for the treatment and control of adult *Ascaridia galli* in broiler chickens and replacement chickens and for the treatment and control of adult *A. galli* and *Heterakis gallinarum* in breeding chickens and laying hens.

Vaccinate

LT-IVAX®

UIN: 145489 DOSE: 10 x 1000

This product has been shown to be effective for the vaccination of healthy chickens 4 weeks of age or older against infectious fowl laryngotracheitis.

COCCIVAC®-D2

UIN: 047667 DOSE: 10 x 1000

This product has been shown to be effective for the vaccination of healthy chickens 1 day of age or 4 days of age against coccidiosis due to *Eimeria acervulina*, *E. brunetti*, *E. maxima*, *E. mivati*, *E. necatrix* and *E. tenella*.

PP-VAC™

UIN: 054316 DOSE: 10 x 1000

This product has been shown to be effective for the vaccination of healthy chickens 6 to 18 weeks of age against fowl pox.

Control

SYNERGIZED DELICE®

UIN: 168042

SYNERGIZED DELICE® formula safely and effectively targets and controls a wide range of insects and pests from chicken premises.

IMPORTANT SAFETY INFORMATION: SAFE-GUARD® AquaSol (fenbendazole oral suspension): Not for use in humans. Accidental exposure may result in skin and eye irritation and may cause gastrointestinal disturbances and hypersensitivity reactions in humans. No withdrawal period is required when used according to the label. Consult your veterinarian for assistance in the diagnosis, treatment and control of parasitism.
