

safe-guard®
(fenbendazole)

Parasite protection is now on the menu.

Deworming meets the pasture

95% of parasites aren't living in your herd—they're living in your pastures.¹ SAFE-GUARD® (fenbendazole) feed formulations offer a proven option to help break the cycle of reinfection during grazing. From blocks to pellets to cubes, choose an option that fits your operation for the proven deworming performance that only comes from SAFE-GUARD.
