

Vision[®]

AN EXTRA CALF WITH EVERY BOTTLE

PROVEN PROTECTION. LESS STRESS.

Not all blackleg vaccines are the same. Some are stressful and decrease performance. Vision[®] isn't like that – it was developed to minimize the negative impact of vaccination on performance.

Compared to 5 mL blackleg vaccines currently on the market, calves vaccinated with a convenient 2 mL dose of Vision had up to a 9- to 18-pound weaning weight advantage. That adds up to getting an extra calf with every 50-dose bottle of Vision.*

Talk to your veterinarian or Merck Animal Health representative about Vision vaccines today.
