

RALGRO[®]
(z e r a n o l)

The gold standard
in calf implanting.

Heavier weaning weights that deliver
greater revenue in your calf crops.

Proven versatility.

Zeranol, the active component in Ralgro[®], is non-sex-specific, which makes RALGRO one of the few implants that can be used in cow/calf, stocker and feedlot cattle.

Proven performance – +23 lbs.

A 23-trial summary comparing the weaning weight gain of 2,358 suckling calves showed an average 23-lb. weaning weight advantage (163 days) with those implanted with RALGRO over non-implanted controls.¹

— Aim higher at **RALGRO.com**. —

IMPORTANT SAFETY INFORMATION:

A withdrawal period has not been established for Ralgro[®] in pre-ruminating calves. Do not use in calves to be processed for veal. For complete information, refer to product label.
